SKILLS

Kotlin
JavaScript
Version control
Jetpack Compose
React js
Firebase
React Native
Core Java
Object Oriented Programming
Android Development
Database
Tailwind CSS

EDUCATION

shivajirao jondhale college of engineering

Bachelor of Engineering

Computer Science

LANGUAGES

English

Hindi

PROFILE

Enthusiastic fresher with a strong foundation in Android and frontend development, backed by hands-on experience in diverse projects. Proficient in Jetpack Compose and XML layouts for Android, as well as React Native and React.js for web and cross-platform applications. Recently certified by Meta in Android Development and React, showcasing a proactive approach to learning and implementing innovative solutions. Seeking an entry-level role where I can leverage my diverse project experiences, technical skills in Android and frontend development, and commitment to continuous learning to contribute to innovative software solutions.

PROJECTS

Travelcompanion app (jetpack compose)

- Built a travel companion app with Jetpack Compose, featuring beautiful layouts, Google Maps implementation, Firebase authentication, and smooth user experience. The app fetches data from APIs to provide real-time travel information
- Link: <https://github.com/NoobCoderraj/TravelCompanion>

Firebase Authentication (jetpack compose)

- This project aims to implement secure and efficient user authentication within an Android application using Jetpack Compose, the modern UI toolkit for building native Android UIs, and Firebase Authentication, a robust platform for managing user identities.
- Link: <https://github.com/NoobCoderraj/Firebase-Authentication-Page/tree/master>

LittleLemon Food ordering (React Naive)

- The Food Ordering app in React Native with Firebase Authentication aims to revolutionize the way users interact with local restaurants, offering a convenient and personalized dining experience. By leveraging Firebase's robust authentication and real-time database capabilities alongside React Native's cross-platform advantages, the app provides a scalable and responsive solution for both users and restaurant owners alike, promoting efficiency, user satisfaction, and business growth.
- Link: <https://github.com/NoobCoderraj/LittleLemon>

EV Station (React Native)

- The EV Station Finder app in React Native with Google Maps integration aims to simplify the process of locating and navigating to nearby charging points for electric vehicle users. By combining intuitive design, robust mapping features, and real-time data updates, the app enhances user convenience, promotes sustainable transportation practices, and contributes to the adoption of electric vehicles in a user-friendly manner.

Google gemini (react js)

- Developed a website using React.js, implementing the Gemini API for query handling and creating a beautiful, responsive layout.
